

Look the data

Not enough columns or rows
(univariate and bivariate analysis only)

Yes, enough columns or rows
(multivariate analysis, too much work to do it by hand)

Multivariate
Methods

They will help us

No target variable (no label data)
no column informing what needs to be predicted

Yes, target variable (labelled data)
there is a column informing what needs to be predicted

Non-supervised

Supervised

$\#columns * 20 > \# rows$
Or Multicollinearity
/Correlation/Causality

$\#columns * 20 < \# rows$

Target continuous

Target Binary
/ Categorical
